

ALB

John Carter Brown.

Ms. Carter Snow
1849.

Thomas Hariot, an eminent English Mathematician, was born at Oxford, in the Year 1560. Having been instructed in Grammar Learning, in that City, he became a Commoner of S^t. Mary Hall, where he took a Bachelor's Degree in 1579. He had then so distinguished himself by his uncommon Skill in Mathematics, as to be soon after recommended, to S^r. Walter Raleigh as a proper Preceptor to him in that Science. Accordingly that Noble Knight became his first Patron, took him into his Family, and allowed him a handsome Pension. In 1585, he was sent over by S^r. Walter Raleigh, with his first Colony to Virginia; where being settled, he was employed in discovering and surveying that Country, and observing what Commodities it produced, together with the Manners and Customs of its Inhabitants. He published this Book, as an Account of Virginia; and it was afterwards reprinted, in the third Volume of Hakluyt's Voyages. Upon his return to England, he was introduced by his Patron to the Acquaintance of Henry Earl of Northumberland, who allowed him a Pension of £120 yearly. About the same time, M^r. Robert Hues, well known by his Treatise upon the Globes, and M^r. Walter Warner, who is said to have communicated to the Famous Harvey, the first hint concerning the Circulation of the Blood, being both of them Mathematicians, received Pensions from him of less value. So that in 1600, when the Earl was committed to the Tower for Life, Hariot, Hues, and Warner, were his constant Companions, and were usually called the Earl of Northumberland's three Magi. They had a Table at the Earl's Charge, and the Earl did constantly converse with them, to divert the Melancholy of his confinement; as did also S^r. Walter Raleigh, who was in the Tower at the same time. M^r. Thomas Hariot, lived for some time at Sion College, and died in London July the 2nd 1621, of a Cancer in his Lip. He was universally esteemed on account of his Learning. When he was but a young Man, he was stiled by M^r. Hakluyt, "Juvenis per disciplinam Mathematicam excellens"; and by Camden, "Mathematicus Insignis." #

3
TO THE RIGHT
WORTHIE AND HONOV.
RABLE, SIR VVALTER RALEGH,
KNIGHT, SENESCHAL OF THE DVCHIES OF
Cornewall and Exeter, and L. Warden of the stannaries in Deuon
and Cornewall, T.B. wisheth true felicitie.

SIR, seeing that the parte of the Worlde, which is betwene the
FLORIDA and the Cap BRETON nowe nammed VIRGI-
NIA, to the honneur of yours most souueraine Layde and Quee-
ne ELIZABETZ, hath ben descouered by yours meanes. And
great chardges. And that your Collonye hath been theer estab-
lished to your great honnor and prayse, and noe lesser proffit vnto the common

welth: It ys good raifon that euery man euertwe him felfe for to showe the bene-
 fit which they haue receue of yt. Theerfore, for my parte I haue been allwayes
 Desirous for to make you knowe the good will that I haue to remayne still your
 most humble feruant. I haue thincke that I cold faynde noe better occasion to
 declare yt, then takinge the paines to cott in copper (the most diligent ye and well
 that wear in my possible to doe) the Figures which doe leuelye represent the for-
 me and maner of the Inhabitants of the same countrie with theirs ceremonies,
 follemne, feastes, and the maner and situation of their Townes, or Villages.
 Addinge vnto euery figure a brief declaration of the same, to that ende that eue-
 ry man cold the better vnderstand that which is in liuelye represented. Moreo-
 uer I haue thincke that the afore said figures wear of greater commendation, Jf
 somme Histoire which traitinge of the commodites and fertillitye of the said coun-
 trye wear Ioyned with the same, therefore haue I serue mi selfe of the rapport
 which Thomas Hariot hath lattely sett foorth, and haue cause them booth togi-
 ther to be printed for to dedicated vnto you, as a thiuge which by reighte dooth
 allreadye apparteyne vnto you. Therefore doe I creauie that you will accept this
 little Booke, and take yt In goode partte. And desiringe that fauor that you will
 receue me in the number of one of your most humble feruantz, beseechinge the
 lord to blesse and further you in all yours good doinges and actions, and allso to
 preserue, and keepe you allwayes in good helthe. And soe I comitt you vnto
 the almyhtie, from Franckfort the first of Aprill 1590.

Your most humble feruant,

THEODORVS de BRY.

5

TO THE ADVENTURERS, FAVORERS, AND WELVVILLERS OF THE ENTERPRISE FOR THE INHABITTING and planting in VIRGINIA.

SINCE the first vndertaking by Sir Walter Raleigh to deale in the action of discouering of that Countrey which is now called and known by the name of VIRGINIA; many voyages hauing bin thither made at sundrie times to his great charge; as first in the yeere 1584. and afterwarde in the yeeres 1585. 1586. and now of late this last yeere of 1587. There haue bin diuers and variable reportes with some slaunderous and shamefull speeches bruited abroade by many that returned from thence. Especially of that discouery which was made by the Colony transported by Sir Richard Greinuile in the yeere 1585. being of all the others the most principal and as yet of most effect, the time of their abode in the countrey being a whole yeare, when as in the other voyage before they staid but sixe weekes; and the others after were onelie for supply and transportation, nothing more being discouered then had been before. Which reports haue not done a litle wrong to many that otherwise would haue also fauoured & aduentured in the action, to the honour and benefite of our nation, besides the particular profite and credite which would redound to them selues the dealers therein; as I hope by the sequele of euents to the shame of those that haue auouched the contrary shalbe manifest: if you the aduenturers, fauourers, and welwillers do but either encrease in number, or in opinion continue, or hauing bin doubtfull renewe your good liking and furtherance to deale therein according to the worthinesse thereof alreadye found and as you shall vnderstand hereafter to be requisite. Touching which woorthines through cause of the diuersitie of relations and reportes, manye of your opinions couldie not bee firme, nor the mindes of some that are well disposed, bee settled in any certaintie.

I haue therefore thought it good being one that haue beene in the discouerie and in dealing with the naturall inhabitantes specially imploied; and hauing therefore seene and knowne more then the ordinarie: to imparte so much vnto you of the fruites of our labours, as that you may knowe howe iniuriously the enterprise is slaundered. And that in publike manner at this present chieflie for two respectes.

First that some of you which are yet ignorant or doubtfull of the state thereof, may see that there is sufficiēt cause why the cheefe enterpriser with the fauour of her Maiestie, notwithstanding suche reportes; hath not onelie since continued the action by sending into the countrey againe, and replanting this last yeere a new Colony; but is also readie, according as the times and meanes will affoorde, to follow and profecute the same.

Secondly, that you seeing and knowing the continuance of the action by the view hereof you may generally know & learne what the countrey is, & ther vpon cōsider how your dealing therein if it proceede, may returne you profit and gaine; bee it either by inhabitting & planting or otherwise in furthering thereof.

And least that the substance of my relation should be doubtful vnto you, as of others by reason of their diuersitie: I will first open the cause in a few wordes wherefore they are

so different; referring my selue to your fauourable constructions, and to be adiudged of as by good consideration you shall finde cause.

Of our companie that returned some for their misdemenour and ill dealing in the countrey, haue beene there worthily punished; who by reason of their badde natures, haue maliciously not onelie spoken ill of their Gouvernours; but for their sakes slaundered the countrie it selfe. The like also haue those done which were of their consort.

Some beeing ignorant of the state thereof, notwithstanding since their returne amongst their friendes and acquaintance and also others, especially if they were in compaign where they might not be gaine saide; woulde seeme to knowe so much as no men more; and make no men so great traualers as themselues. They stood so much as it maie seeme vppon their credite and reputation that hauing been a twelue moneth in the countrey, it woulde haue beene a great disgrace vnto them as they thought, if they could not haue saide much wheter it were true or false. Of which some haue spoken of more then euer they saw or otherwise knew to bee there; other some haue not bin ashamed to make absolute deniall of that which although not by thē, yet by others is most certainly ad there plerifullly knowne. And other some make difficulties of those things they haue no skill of.

The cause of their ignorance was, in that they were of that many that were neuer out of the Iland where wee were seated, or not farre, or at the leastwise in few places els, during the time of our abode in the countrey; or of that many that after golde and siluer was not so soone found, as it was by them looked for, had little or no care of any other thing but to pamper their bellies; or of that many which had little vnderstanding, lesse discretion, and more tongue then was needfull or requisite.

Some also were of a nice bringing vp; only in cities or townes, or such as neuer (as I may say) had seene the world before. Because there were not to bee found any English cities, nor such faire houses, nor at their owne wish any of their olde accustomed daintie food, nor any soft beds of downe or fethers: the countrey was to them miserable, & their reports thereof according.

Because my purpose was but in briefto open the cause of the varietie of such speeches; the particularities of them, and of many enuious, malicious, and slaüderous reports and deuises els, by our owne countrey men besides; as trifles that are not worthy of wise men to bee thought vpon, I meane not to trouble you withall: but will passe to the commodities, the substance of that which I haue to make relation of vnto you.

The treatise where of for your more readie view & easier vnderstanding I will diuide into three speciall parts. In the first I will make declaration of such commodities there already found or to be raised, which will not onely serue the ordinary turnes of you which are and shall bee the platers and inhabitants, but such an ouerplus sufficiently to bee yielded, or by men of skill to bee provided, as by way of trafficke and exchange with our owne nation of England, will enrich your selues the prouiders; those that shal deal with you; the enterprisers in general; and greatly profit our owne countrey men, to supply them with most things which heretofore they haue bene faine to provide, either of strangers or of our enemies: which commodities for distinction sake, I call *Merchantable*.

In the second, I will set downe all the comodities which wee know the countrey by our experience doeth yeld of it selfe for victuall, and sustenance of mans life; such as is vsually fed vpon by the inhabitants of the countrey, as also by vs during the time we were there.

In the last part I will make mention generally of such other comodities besides, as I am able to remember, and as I shall thinke behoofull for those that shall inhabite, and plant there to knowe of; which specially concerne building, as also some other necessary vses: with a brieft description of the nature and maners of the people of the countrey.

THE FIRST PART,
OF MARCHAN-
TABLE COMMO-
DITIES.

Silke of grasse or grasse Silke.

Here is a kind of grasse in the countrey vppon the blades where of there groweth very good silke in forme of a thin glittering skin to bee stript of. It groweth two foote and a halfe high or better: the blades are about two foot in length, and halfe inch broad. The like groweth in Persia, which is in the selfe same climate as Virginia, of which very many of the silke workes that come from thence into Europe are made. Here of if it be planted and ordered as in Persia, it cannot in reason be otherwise, but that there will rise in shorte time great profite to the dealers therein; seeing there is so great vse and vent thereof as well in our countrey as els where. And by the meanes of sowing & plating in good ground, it will be farre greater, better, and more plentiful then it is. Although notwithstanding there is great store thereof in many places of the countrey growing naturally and wilde. Which also by proof here in England, in making a piece of silke Grogan, we found to be excellent good.

Worme Silke.

In manie of our iourneyes we found silke wormes fayre and great; as bigge as our ordinary walnüttes. Although it hath not beene our happe to haue found such plentie as else where to be in the countrey we haue heard of, yet seeing that the countrey doth naturally breede and nourish them, there is no doubt but if art be added

A briefe and true report,

in plantig of mulbery trees and others fitte for them in commodious places, for their feeding and nourishing; and some of them carefully gathered and husbanded in that sort as by men of skill is knowne to be necessarie: there will rise as great profite in time to the Virginians, as there of doth now to the Persians, Turkes, Italians and Spaniards.

Flaxe and Hempe.

The trueth is that of Hempe and Flaxe there is no great store in any one place together, by reason it is not planted but as the soile doth yeeld it of it selfe; and howsoever the leafe, and stemme or stalke doe differ from ours; the stuffe by the iudgemēt of men of skill is altogether as good as ours. And if not, as further prooffe should finde otherwise; we haue that experience of the soile, as thas there cannot be shewed anie reason to the contrary, but that it will grow there excellent well; and by planting will be yeilded plentifully: seeing there is so much ground whereof some may well be applyed to such purposes. What benefite heereof may growe in cordage and linnens who can not easily vnderstand?

Allum.

There is a veine of earth along the sea coast for the space of fourtie or fiftie miles, whereof by the iudgement of some that haue made triall heere in England, is made good Allum, of that kinde which is called Roche Allum. The richnesse of such a commoditie is so well knowne that I neede not to saye any thing thereof. The same earth doth also yeelde White Copresse, Nitrum, and Alumen Plumeum, but nothing so plentifully as the common Allum; which be also of price and profitable.

Wapeih.

Wapeih, a kinde of earth so called by the naturall inhabitants; very like to terra sigillata: and hauing beene refined, it hath beene found by some of our Phisitios and Chirurgeons to be of the same kinde of vertue and more effectuell. The inhabitants vse it very much for the cure of sores and woundes: there is in diuers places great plentie, and in some places of a blewe sort.

Pitch, Tarre, Rozen, and Turpentine.

There are those kindes of trees which yeelde them abundantly and great store. In the very same Iland where wee were seated, being fiftene miles of length, and fve or sixe miles in breadth, there are fewe trees els but of the same kind; the whole Iland being full.

Sassafras.

Sassafras.

Sassafras, called by the inhabitantes *Winauk*, a kinde of wood of most pleafand and fwete fmel; and of most rare vertues in phifick for the cure of many difeafes. It is found by experience to bee farre better and of more vfes then the wood which is called *Guaiacum*, or *Lignum vita*. For the description, the manner of vſing and the manifolde vertues thereof, I referre you to the booke of *Monardus*, translated and entituled in English, *The ioyfull newes from the Weſt Indies*.

Cedar.

Cedar, a very fwete wood & fine timber; wherof if neſts of cheſts be there made, or timber therof fitted for fwete & fine bedſteads, tables, deſkes, lutes, virginalles & many things elſe, (of which there hath bene prooffe made already) to make vp fraite with other principal commodities will yeeld profite.

Wine.

There are two kinds of grapes that the foile doth yeeld naturally: the one is ſmall and ſowre of the ordinarie bigneſſe as ours in England: the other farre greater & of himſelfe iuſhious fwete. When they are plâted and huſbandeg as they ought, a principall commoditie of wines by them may be raiſed.

Oyle.

There are two ſortes of *Walnuttes* both holding oyle, but the one farre more plentifull then the other. When there are milles & other deuifes for the purpoſe, a commodity of them may be raiſed becauſe there are infinite ſtore. There are alſo three ſeuerall kinds of *Berries* in the forme of Oke akornes, which alſo by the experience and vſe of the inhabitantes, wee finde to yeelde very good and fwete oyle. Furthermore the *Beares* of the countrey are commonly very fatte, and in ſome places there are many: their fatneſſe becauſe it is ſo liquid, may well be termed oyle, and hath many ſpeciall vſes.

Furres:

All along the Sea coaſt there are great ſtore of *Otters*, which beeyng taken by weares and other engines made for the purpoſe, will yeelde good profite. Wee hope alſo of *Marterne furres*, and make no doubt by the relation of the people but that in ſome places of the countrey there are ſtore: although there were but two ſkinnes that came to our handes. *Luzarnes* alſo we haue vnderſtânding of, although for the time we ſaw none.

A briefe and true report,

Deare skinnes.

Deare skinnes dressed after the manner of *Chamoës* or vndressed are to be had of the naturall inhabitants thousands yeerely by way of trafficke for trifles: and no more wast or spoile of Deare then is and hath beene ordinarily in time before.

Civet cattes.

In our trauailes, there was founde one to haue beene killed by a saluage or inhabitant: and in an other place the smell where one or more had lately beene before: whereby we gather besides then by the relation of the people that there are some in the countrey: good profite will rise by them.

Iron.

In two places of the countrey specially, one about fourescore and the other fixe score miles from the Fort or place where wee dwelt: wee founde neere the water side the ground to be rockie, which by the triall of a minerall man, was founde to holde Iron richly. It is founde in manie places of the countrey else. I knowe nothing to the contrarie, but that it maie bee allowed for a good marchantable commoditye, considering there the small charge for the labour and feeding of men: the infinite store of wood: the want of wood and deereness thereof in England: & the necessity of ballasting of shippes.

Copper.

A hundred and fiftie miles into the maine in two townes wee founde with the inhabitaunts diuerse small plates of copper, that had beene made as wee vnderstood, by the inhabitantes that dwell farther into the countrey: where as they say are mountaines and Riuers that yeelde also whyte graynes of Mettall, which is to bee deemed *Siluer*. For confirmation whereof at the time of our first arriual in the Countrey, I sawe with some others with mee, two small peeces of siluer grossly beaten about the weight of a Testrone, hangyng in the eares of a *Wiroans* or *chiefe Lorde* that dwelt about fourescore myles from vs; of whom thorowe enquiry, by the number of dayes and the way, I learned that it had come to his handes from the same place or neere, where I after vnderstood the copper was made and the white graynes of mettall founde. The aforesaide copper wee also founde by triall to holde siluer.

Pearle.

Sometimes in feeding on muscles wee founde some pearle; but it was our hap to meete with ragges, or of a pide colour; not hauing yet discovered those places

Of the new foundland of Virginia.

11

places where wee hearde of better and more plentie. One of our companie; a man of skill in such matters, had gathered to gether from among the sauage people aboute fūe thousande: of which number he chose so many as made a fayre chaine, which for their likenesse and vniformitie in roundnesse, orientnesse, and pidenesse of māny excellent colours, with equalitie in greatnesse, were verie fayre and rare; and had therefore beene presented to her Maiestie, had wee not by casualtie and trough extremity of a storme, lost them with many things els in comming away from the countrey.

Sweete Gummes.

Sweete Gummes of diuers kindes and many other Apothecary drugges of which wee will make speciall mention, when wee shall receiue it from such men of skill in that kynd, that in taking reasonable paines shall discouer them more particularly then wee haue done; and than now I can make relation of, for want of the examples I had prouided and gathered, and are nowe lost, with other thinges by causualtie before mentioned.

Dyes of diuers kindes.

There is Shoemake well knowen, and vsed in England for blacke; the seede of an hearbe called *Wasewowr*: little small rootes called *Chappacor*; and the barke of the tree called by the inhabitants *Tangomockonomindge*: which Dies are for diuers sortes of red: their goodnesse for our English clothes remayne yet to be proued. The inhabitants vse them onely for the dying of hayre; and colouring of their faces, and Mantles made of Deare skinnes; and also for the dying of Rushes to make artificiall workes withall in their Mattes and Baskettes; hauing no other thing besides that they account of, apt to vse them for. If they will not proue merchantable there is no doubt but the Planters there shall finde apte vses for them, as also for other colours which wee knowe to be there.

Oade.

A thing of so great vent and vse amongst English Diers, which cannot be yeelded sufficiently in our owne countrey for spare of ground; may be planted in Virginia, there being ground enough. The growth thereof need not to be doubted when as in the Ilandes of the Afores it groweth plentifully, which is in the same climate. So likewise of Madder.

Suger canes.

Whe carried thither Suger canes to plant which beeing not so well preserued as was requisit, & besides the time of the yere being past for their setting when we

A briefe and true report,

arriued, wee could not make that prooffe of them as wee desired. Notwithſtā ding ſeeing that they grow in the ſame climate, in the South part of Spaine and in Barbary, our hope in reaſon may yet continue. So likewise for *Orenges*, and *Lemmons*, there may be planted alſo *Quinſes*. Wherbi may grow in reaſonable time if the action be diligently proſecuted, no ſmall commodities in *Sugers*, *Suckets*, and *Marmalades*.

Many other commodities by planting may there alſo bee raiſed, which I leaue to your diſcret and gentle conſiderations: and many alſo may bee there which yet we haue not diſcouered. Two more commodities of great value one of certaintie, and the other in hope, not to be planted, but there to be raiſed & in ſhort time to be prouided and prepared, I might haue ſpecified. So likewise of thoſe commodities already ſet downe I might haue ſaid more; as of the particular places where they are founde and beſt to be planted and prepared: by what meanes and in what reaſonable ſpace of time they might be raiſed to profit and in what proportion; but becauſe others then we willers might bee therewithall acquainted, not to the good of the action, I haue wittingly omitted them: knowing that to thoſe that are well diſpoſed I haue vttered, according to my promiſe and purpoſe, for this part ſufficient.

THE

THE SECOND PART,
 OF SVCHE COMMODITIES AS VIRGINIA IS
 knowne to yeelde for victuall and sustenance of mans
 life, vsually fed vpon by the naturall inhabitants:
 as also by vs during the time of our aboad.

And first of such as are sowed
 and husbanded.

PAGATOWR, a kinde of graine so called by the inhabitants; the same in the West Indies is called MAYZE: English men call it Guinney wheate or Turkie wheate, according to the names of the countreys from whence the like hath bene brought. The graine is about the bignesse of our ordinary English peaze and not much different in forme and shape: but of diuers colours: some white, some red, some yellow, and some blew. All of them yeelde a very white and sweete flowre: being vsed according to his kinde it maketh a very good bread. Wee made of the same in the countrey some mault, whereof was brued as good ale as was to bee desired. So likewise by the help of hops therof may bee made as good Beere. It is a graine of marueilous great increase; of a thousand, fiftene hundred and some two thousand fold. There are three sortes, of which two are ripe in an eleuen and twelue weekes at the most: sometimes in ten, after the time they are set, and are then of height in stalke about sixe or seuen foote. The other sort is ripe in fourteene, and is about ten foote high, of the stalkes some beare foure heads, some three, some one, and two: euery head containing fiue, sixe, or seue hundred graines within a fewe more or lesse. Of these graines besides bread, the inhabitants make victuall

eyther by parching them; or seething them whole vntill they be broken; or boyling the floure with water into a pappe.

Okindgier, called by vs *Beanes*, because in greatnesse & partly in shape they are like to the Beanes in England; sauing that they are flatter, of more diuers colours, and some pide. The leafe also of the stemme is much different. In taste they are altogether as good as our English peaze.

Wickonzówr, called by vs *Peaze*; in respect of the beanes for distinction sake, because they are much lesse; although in forme they little differ; but in goodnesse of tast much, & are far better then our English peaze. Both the beanes and peaze are ripe in tenne weekes after they are set. They make them victuall either by boyling them all to pieces into a broth; or boiling them whole vntill they bee soft and beginne to breake as is vsed in England, eyther by themselues or mixtly together: Sometime they mingle of the wheate with them. Sometime also being whole soddeu, they bruse or pound them in a mortar, & thereof make loaves or lumps of dowishe bread, which they vse to eat for varietie.

Macócqwer, according to their seuerall formes called by vs, *Pompions*, *Melions*, and *Gourdes*, because they are of the like formes as those kindes in England. In *Virginia* such of seuerall formes are of one taste and very good, and do also spring from one seed. There are of two sorts; one is ripe in the space of a moneth, and the other in two moneths.

There is an hearbe which in Dutch is called *Melden*. Some of those that I describe vnto, take it to be a kinde of Orage; it groweth about foure or fiue foote high: of the seede thereof they make a thicke broth, and pottage of a very good taste: of the stalke by burning into ashes they make a kinde of salt earth, wherewithall many vse sometimes to season their brothes; other salte they knowe not. Wee our selues, vsed the leaues also for pothearbcs.

There is also another great hearbe in forme of a Marigolde, about fixe foote in height; the head with the floure is a spanne in breadth. Some take it to bee *Planta Solis*: of the feedes heereof they make both a kinde of bread and broth.

All the aforefaide commodities for victuall are set or sowed, sometimes in groundes a part and seuerally by themselues; but for the most part together in one ground mixtly: the manner thereof with the dressing and preparing of the ground, because I will note vnto you the fertilitie of the soile; I thinke good briefly to describe.

The ground they neuer fatten with mucke, dounge or any other thing; neither plow nor digge it as we in England, but onely prepare it in fort as followeth. A fewc daies before they sowe or set, the men with wooden instruments, made almost in forme of mattockes or hoes with long handles; the women with short peckers or parers, because they vse them sitting, of a foote long and about fiue inches in breadth: doe onely breake the vpper part of the ground to rayse vp the weedcs, grasse, & old stubbes of corne stalkes with their rootcs. The which after a day or twoccs
drying

drying in the Sunne, being scrapte vp into many small heapes, to saue them labour for carrying them away; they burne into ashes. (And whereas some may thinke that they vse the ashes for to better the grounde; I say that then they woulde eyther disperse the ashes abroad; which wee obserued they doe not, except the heapes bee too great: or els would take speciall care to set their corne where the ashes lie, which also wee finde they are carelesse of.) And this is all the husbanding of their ground that they vse.

Then their setting or sowing is after this maner. First for their corne, beginning in one corner of the plot, with a pecker they make a hole, wherein they put foure graines with that care they touch not one another, (about an inch asunder) and couer them with the moulde againe: and so through out the whole plot, making such holes and vsing them after such maner: but with this regard that they bee made in rankes, euery rake differing from other halfe a fadome or a yarde, and the holes also in euery ranke, as much. By this meanes there is a yarde spare ground betwene euery hole: where according to discretion here and there, they set as many Beanes and Peaze: in diuers places also among the seedes of *Macócqwer*, *Melden* and *Planta Solis*.

The ground being thus set according to the rate by vs experimented, an English Acre conteining fourtie pearches in length, and foure in breadth, doeth there yeeld in croppe or of come of corne, beanes, and peaze, at the least two hūdred London bushelles: besides the *Macócqwer*, *Melden*, and *Planta Solis*: When as in England fourtie bushelles of our wheate yeilded out of such an acre is thought to be much.

I thought also good to note this vnto you, if you which shall inhabite and plant there, maie know how specially that countrey corne is there to be preferred before ours: Besides the manifold waies in applying it to victuall, the increase is so much that small labour and paines is needful in respect that mult be vsed for ours. For this I can assure you that according to the rate we haue made prooffe of, one man may prepare and husbane so much grounde (hauing once borne corne before) with lesse the foure and twentie houres labour, as shall yeelde him victuall in a large proportiō for a twelue moeth, if hee haue nothing else, but that which the same ground will yeelde, and of that kinde onelie which I haue before spoken of: the saide ground being also but of fiue and twentie yards square. And if neede require, but that there is ground enough, there might be raised out of one and the selfsame ground two haruestes or of comes; for they sowe or set and may at anie time when they thinke good from the middest of March vntill the ende of Iune: so that they also set when they haue eaten of their first croppe. In some places of the countrey notwithstanding they haue two haruests, as we haue heard, out of one and the same ground.

For English corne neuertheles whether to vse or not to vse it, you that inhabite maie do as you shall haue farther cause to thinke best. Of the growth you need not to doubt: for barlie, oates and peaze, we haue seene proof of, not beeing purposely

sowen but fallen casually in the worst sort of ground, and yet to be as faire as any we haue euer seene here in England. But of wheat because it was musty and hat taken salt water wee could make no triall: and of rye we had none. Thus much haue I digressed and I hope not vnnecessarily: now we will I returne againe to my course and intreate of that which yet remaineth appertaining to this Chapter.

There is an herbe which is sowen a part by it selfe & is called by the inhabitants Vppowoc: In the West Indies it hath diuers names, according to the seuerall places & countries where it groweth and is vsed: The Spaniardes generally call it Tobacco. The leaues thereof being dried and brought into powder: they vse to take the fume or smoke thereof by sucking it through pipes made of claie into their stomacke and heade; from whence it purgeth superfluous fleame & other grosse humors, openeth all the pores & passages of the body: by which meane the vse thereof, not only preferueth the body from obstructiōs; but also if any be, so that they haue not beene of too long continuance, in shourt time breaketh them: wherby their bodies are notably preferued in health, & know not many greuous diseases wherewithall wee in England are oftentimes afflicted.

This Vppowoc is of so precious estimation amongst them, that they thinke their gods are maruelously delighted therewith: Wherupon sometime they make hallowed fires & cast some of the powder therein for a sacrifice: being in a storme vpon the waters, to pacifie their gods, they cast some vp into the aire and into the water: so a weare for fish being newly set vp, they cast some therein and into the aire: also after an escape of danger, they cast some into the aire likewise: but all done with strange gestures, stamping, somtime dauncing, clapping of hands, holding vp of hands, & staring vp into the heauens, vttering therewithal and chattering strange words & noises.

We our selues during the time we were there vsed to suck it after their maner, as also since our returne, & haue found maine rare and wonderful experiments of the vertues thereof; of which the relation woulde require a volume by it selfe: the vse of it by so manie of late, men & women of great calling as else, and some learned Phisitions also, is sufficient witnes.

And these are all the commodities for sustenance of life that I know and can remember they vse to husband: all else that followe are founde growing naturally or wilde.

Of Rootes.

O P E N A V K are a kind of roots of round forme, some of the bignes of walnuts, some far greater, which are found in moist & marish grounds growing many together one by another in ropes, or as thogh they were fastened with a string. Being boiled or sodden they are very good meate.

O K E E P E N A V K are also of round shape, found in dry grounds: some are
of the

of the bignes of a mans head. They are to be eaten as they are taken out of the ground, for by reason of their drinesse they will neither roste nor seeth. Their tast is not so good as of the former rootes, notwithstanding for want of bread & somtimes for varietie the inhabitants vse to eat them with fish or flesh, and in my iudgement they doe as well as the houshold bread made of rie heere in England.

Kaishúcpenauk a white kind of roots about the bignes of hen eggs & nere of that forme their tast was not so good to our seeming as of the other, and therefore their place and manner of growing not so much cared for by vs: the inhabitants notwithstanding vsed to boile & eat many.

Tsinaw a kind of roote much like vnto the which in England is called the *China root* brought from the East Indies. And we know not anie thing to the cōtrary but that it maie be of the same kind. These roots grow manie together in great clusters and doe bring foorth a brier stalke, but the leafe in shape far vnlike; which beeing supported by the trees it groweth neere vnto, wil reach or climbe to the top of the highest. From these roots while they be new or fresh beeing chopt into small pieces & stampd, is strained with water a iuice that maketh bread, & also being boiled, a very good spoonemeate in maner of a gelly, and is much better in tast if it bee tempered with oyle. This *Tsinaw* is not of that sort which by some was caused to be brought into England for the *China roote*, for it was discouered since, and is in vse as is afore saide: but that which was brought hither is not yet knowne neither by vs nor by the inhabitants to serue for any vse or purpose; although the rootes in shape are very like.

Coscúshaw, some of our company tooke to bee that kinde of roote which the Spaniards in the West Indies call *Cassany*, whereupon also many called it by that name: it groweth in very muddie pooles and moist groundes. Being dressed according to the countrey maner, it maketh a good bread, and also a good sponemeate, and is vsed very much by the inhabitants: The iuice of this root is poison, and therefore heede must be taken before any thing be made therewithal: Either the rootes must bee first sliced and dried in the Sunne, or by the fire, and then being pounded into floure wil make good bread: or els while they are greene they are to be pared, cut into pieces and stampd; loues of the same to be laid neere or ouer the fire vntill it be soure, and then being well pounded againe, bread, or sponemeate very good in taste, and holsome may be made thereof.

Habascan is a roote of hoat taste almost of the forme and bignesse of a Parsenpee, of it selfe it is no victuall, but onely a helpe beeing boiled together with other meates.

There are also *Leekes* differing little from ours in England that grow in many places of the countrey; of which, when we came in places where, we gathered and ate many, but the naturall inhabitants neuer:

A brieftant true report, Of Fruites.

CHESTNUTS, there are in diuers places great store: some they vse to eate rawe, some they stampe and boile to make spoonmeate, and with some being sodden they make such a manner of dowe bread as they vse of their beanes before mentioned.

WALNUTS: There are two kindes of Walnuts, and of then infinit store: In many places where very great woods for many miles together the third part of trees are walnut trees. The one kind is of the same taste and forme or litle differing from ours of England, but that they are harder and thicker shelled: the other is greater and hath a verie ragged and harde shell: but the kernell great, verie oylie and sweete. Besides their eating of them after our ordinarie maner, they breake them with stones and pound them in morters with water to make a milk which they vse to put into some sorts of their spoonmeate; also among their sodde wheat, peaze, beanes and pompions which maketh them haue a farre more pleasant taste.

MEDLARS a kind of verie good fruit, so called by vs chieffie for these respectes: first in that they are not good vntill they be rotten: then in that they open at the head as our medlars, and are about the same bignesse: otherwise in taste and colour they are farre differēt: for they are as red as cherries and very sweet: but whereas the cherie is sharpe sweet, they are lushious sweet.

METAQUESUNNAVK, a kinde of pleasaunt fruite almost of the shape & bignes of English peares, but that they are of a perfect red colour as well within as without. They grow on a plant whose leaues are verie thicke and full of prickles as sharpe as needles. Some that haue bin in the Indies, where they haue seen that kind of red die of great price which is called Cochinile to grow, doe describe his plant right like vnto this of Metaquesunnauk but whether it be the true Cochinile or a bastard or wilde kind, it cannot yet be certified; seeing that also as I heard, Cochinile is not of the fruite but founde on the leaues of the plant; which leaues for such matter we haue not so specially obserued.

GRAPES there are of two sorts which I mentioned in the marchantable commodities.

STRABERIES there are as good & as great as those which we haue in our English gardens.

MULBERIES, Applecrabs, Hurts or Hurtleberies, such as wee haue in England.

SACQVENVMNER a kinde of berries almost like vnto capres but somewhat greater which grow together in clusters vpon a plant or herb that is found in shalow waters: being boiled eight or nine hours according to their kind are very good meate and holesome, otherwise if they be eaten they will make a man for the time franticke or extremely sicke.

There is a kind of reed which beareth a seed almost like vnto our rie or wheat, & being boiled is good meate.

In our trauailes in some places wee founde wilde peaze like vnto ours in England but that they were lesse, which are also good meate.

*Of a kinde of fruite or berrie in forme of
Acornes.*

There is a kind of berrie or acorne, of which there are fīue sorts that grow on feuerall kinds of trees; the one is called *Sagatémener*, the second *Osamener*, the third *Pummuckóner*. These kind of acornes they vse to drie vpon hurdles made of reeds with fire vnderneath almost after the maner as we dry malt in England. When they are to be vsed they first water them vntil they be soft & then being sod they make a good victuall, either to eate so simply, or els being also pounded, to make loaves or lumpes of bread. These be also the three kinds of which, I said before, the inhabitants vsed to make sweet oyle.

An other sort is called *Sapúmmener* which being boiled or parched doth eate and taste like vnto chestnuts. They sometime also make bread of this sort.

The fifth sort is called *Mangúmmenauk*, and is the acorne of their kind of oake, the which beeing dried after the maner of the first sortes, and afterward watered they boile them, & their seruants or sometime the chiefe theselues, either for variety or for want of bread, doe eate them with their fish or flesh.

Of Beastes.

Deare, in some places there are great store: neere vnto the sea coast they are of the ordinarie bignes as ours in England, & some lesse: but further vp into the countrey where there is better feed they are greater: they differ from ours onely in this, their tailes are longer and the snags of their hornes looke backward.

Conies, Those that we haue seen & al that we can heare of are of a grey colour like vnto hares: in some places there are such plétie that all the people of some townes make them mantles of the furre or flue of the skinnes of those they vsually take.

Saquenúckot & *Maquówoc*; two kindes of small beastes greater then conies which are very good meat. We neuer tooke any of them our selues, but sometime eate of such as the inhabitants had taken & brought vnto vs.

Squirrels which are of a grey colour, we haue taken & eaten.

Beares which are all of black colour. The beares of this countrey are good meat; the inhabitants in time of winter do vse to take & eate manie, so also somtime did wee. They are taken cōmonlie in this sort. In some llands or places where they are, being hunted for, as soone as they haue spiall of a man they presently run awaie, & then being chased they clime and get vp the next tree they can, from whence with arrowes they are shot downe starke dead, or with those wounds that they may after easly be killed; we sometime shotte them downe with our caleeuers.

A briefeant true report,

I haue the names of eight & twenty feuerall sortes of beasts which I haue heard of to be here and there disperfed in the countrie, especially in the maine: of which there are only twelue kinds that we haue yet discovered, & of those that be good meat we know only them before mentioned. The inhabitants somtime kil the *Lyon* & eat him: & we somtime as they came to our hands of their *Wolues* or *woluish Dogges*, which I haue not set downe for good meat, least that some woulde vnderstand my iudgement therin to be more simple than needeth, although I could alleage the difference in taste of those kindes from ours, which by some of our company haue bene experimented in both.

Of Foule.

Turkie cockes and *Turkie hennes*: *Stockdowes*: *Partridges*: *Cranes*: *Hernes*: & in winter great store of *Swannes* & *Geese*. Of al sortes of foule I haue the names in the countrie language of four escore and sixe of which number besides those that be named, we haue taken, eaten, & haue the pictures as they were there drawne with the names of the inhabitants of feuerall strange sortes of water foule eight, and seuentene kinds more of land foul, although wee haue seen and eaten of many more, which for want of leasure there for the purpose coulde not bee pictured: and after wee are better furnished and stored vpon further discouery, with their strange beastes, fishe, trees, plants, and hearbes, they shall bee also published.

There are also *Parats*, *Faulcons*, & *Marlin haukes*, which although with vs they bee not vsed for meate, yet for other causes I thought good to mention.

Of Fishe.

For foure monethes of the yeere, February, March, Aprill and May, there are plentie of *Sturgeons*: And also in the same monethes of *Herrings*, some of the ordinary bignesse as ours in England, but the most part farre greater, of eightene, twentie inches, and some two foote in length and better; both these kindes of fishe in those monethes are most plentiful, and in best season, which wee founde to bee most delicate and pleasaunt meate.

There are also *Troutes*, *Porpoises*, *Rayes*, *Oldwines*, *Mullets*, *Plaice*, and very many other sortes of excellent good fish, which we haue taken & eaten, whose names I know not but in the countrie language; wee haue of twelue sorts more the pictures as they were drawn in the countrie with their names.

The inhabitants vse to take then two maner of wayes, the one is by a kind of wear made of reedes which in that countrie are very strong. The other way which is more strange, is with poles made sharpe at one ende, by shooting them into the fish after the maner as Irishmen cast dartes; either as they are rowing in their boates or els as they are wading in the shallowes for the purpose.

There

Of the new foundland of Virginia.

21

There are also in many places plentie of these kindes which follow.

Sea crabbes, such as we haue in England.

Oystres, some very great, and some small; some rounde and some of a long shape: They are founde both in salt water and brackish, and those that we had out of salt water are far better than the other as in our owne countrey.

Also *Muscles*, *Scalopes*, *Periwinkles*, and *Crewises*.

Seekanauk, a kinde of crustie shell fishe which is good meate, about a foote in breadth, hauing a crustie tayle, many legges like a crab; and her eyes in her backe. They are founde in shalloves of salt waters; and sometime on the shoare.

There are many *Tortoyfes* both of lande and sea kinde, their backes & bellies are shelled very thicke; their head, feete, and taile, which are in appearance, seeme ougly as though they were membres of a serpent or venemous: but notwithstanding they are very good meate, as also their egges. Some haue bene founde of a yard in bredth and better.

And thus haue I made relation of all sortes of victuall that we fed vpon for the time we were in *Virginia*, as also the inhabitants themselues, as farre forth as I knowe and can remember or that are specially worthy to bee remembered.

THE THIRD AND
LAST PART,
OF SVCH OTHER
THINGES AS IS BE HOO-
full for those which shall plant and inhabit to
know of; with a description of the nature
and manners of the people of
the countrey.

*Of commodities for building and other
necessary uses.*

Hose other things which I am more to make rehear-
fall of, are such as concerne building, and other mecha-
nicall necessarie vses; as diuers sortes of trees for house
& ship timber, and other vses els: Also lime, stone, and
brick, least that being not mentioned some might ha-
ue bene doubted of, or by some that are malicious re-
ported the contrary.

Okes, there are as faire, straight, tall, and as good
timber as any can be, and also great store, and in some
places very great.

Walnut trees, as I haue saide before very many, some haue bene seen excellent
faire timber of foure & fiue fadome, & aboue fourescore foot streight without
bough.

Firre trees fit for masts of ships, some very tall & great.

Rakiock,

Rakiock, a kind of trees so called that are sweet wood of which the inhabitants that were neere vnto vs doe commonly make their boats or Canoes of the form of trowes; only with the helpe of fire, harchets of stones, and shels; we haue known some so great being made in that sort of one tree that they haue carried well xx. men at once, besides much baggage: the timber being great, tall, streight, soft, light, & yet tough enough I thinke (besides other vses) to be fit also for masts of ships.

Cedar, a sweet wood good for feelings, Chests, Boxes, Bedsteedes, Lutes, Virginals, and many things els, as I haue also said before. Some of our company which haue wandered in some places where I haue not bene, haue made certaine affirmation of *Cyprus* which for such and other excellent vses, is also a wood of price and no small estimation.

Maple, and also *Wich-hazle*, wherof the inhabitants vse to make their bowes:

Holly a necessary thing for the making of birdlime.

Willowes good for the making of weares and weeles to take fish after the English manner, although the inhabitants vse only reedes, which because they are so strong as also flexible, do serue for that turne very well and sufficiently.

Beech and *Ashé*, good for caske, hoopes: and if neede require, plow worke, as also for many things els.

Elme.

Sassafras trees.

Ascopo a kinde of tree very like vnto Lawrell, the barke is hoat in tast and spicie, it is very like to that tree which Monardus describeth to bee *Cassia Lignea* of the West Indies.

There are many other strange trees whose names I knowe not but in the *Virginian* language, of which I am not nowe able, neither is it so conuenient for the present to trouble you with particular relatió: seeing that for timber and other necessary vses I haue named sufficient: And of many of the rest but that they may be applied to good vse, I know no cause to doubt.

Now for Stone, Bricke and Lime, thus it is. Neere vnto the Sea coast where we dwelt, there are no kinde of stones to be found (except a fewe small pebbles about foure miles off) but such as haue bene brought from farther out of the maine. In some of our voiages we haue seene diuers hard raggie stones, great pebbles, and a kinde of grey stone like vnto marble, of which the inhabitants make their hatchets to cleue wood. Vpon inquirie we heard that a little further vp into the Countrey were of all sortes verie many, although of Quarries they are ignorant, neither haue they vse of any store whereupon they should haue occasion to seeke any. For if euerie housholde haue one or two to cracke Nuttes, grinde shelles, whet copper, and sometimes other stones for hatchets, they haue enough: neither vse they any digging, but onely for graues about three foote deepe: and therefore no maruaile that they know neither Quarries, nor lime stones, which both may be in places neerer than they wot of.

In the meane time vntill there bee discouerie of sufficient store in some place or other cōuenient, the want of you which are and shalbe the planters therein may be as well supplied by Bricke : for the making whereof in diuers places of the countrey there is clay both excellent good, and plentie ; and also by lime made of Oister shels, and of others burnt , after the maner as they vse in the Iles of Tenet and Shepy, and also in diuers other places of England: Which kinde of lime is well knowne to bee as good as any other. And of Oister shels there is plentie enough: for besides diuers other particular places where are abundance, there is one shallowe founde along the coast, where for the space of many miles together in lenght , and two or three miles in breadth, the grounde is nothing els beeing but halfe a foote or a foote vnder water for the most part.

This much can I say further more of stones , that about 120. miles from our fort neere the water in the side of a hill was founde by a Gentleman of our company, a great veine of hard ragge stones, which I thought good to remember vnto you.

Of the nature and manners of the people

It resteth I speake a word or two of the naturall inhabitants , their natures and maners, leauing large discourse thereof vntill time more conuenient hereafter : now we onely so farre foorth, as that you may know , how that they in respect of troubling our inhabiting and planting, are not to be feared; but that they shall haue cause both to feare and loue vs, that shall inhabite with them.

They are a people clothed with loose mantles made of Deere skins , & aprons of the same rounde about their middles; all els naked; of such a difference of statures only as wee in England ; hauing no edge tooles or weapons of yron or Steele to offend vs withall, neither know they how to make any: those weapōs that they haue, are onlie bowes made of Witch hazle , & arrowes of reeds ; flat edged trunchions also of wood about a yard long , neither haue they any thing to defend themselves but targets made of barcks ; and some armours made of stickes wickered together with thread.

Their townes are but small, & neere the sea coast but few , some cōtaining but 10. or 12. houses: some 20. the greatest that we haue seene haue bene but of 30. houses: if they be walled it is only done with barks of trees made fast to stakes, or els with poles onely fixed vpright and close one by another.

Their houses are made of small poles made fast at the tops in rounde forme after the maner as is vsed in many arbories in our gardens of England , in most townes couered with barks , and in some with artificiall mattes made of long rushes; from the tops of the houses downe to the ground. The length of them is commonly double to the breadth, in some places they are but 12. and 16. yardes long , and in other some wee haue seene of foure and twentie.

In

In some places of the countrey one onely towne belongeth to the gouernment of a *Wiróans* or chiefe Lorde; in other some two or three, in some sixe, eight, & more; the greatest *Wiróans* that yet we had dealing with had but eighteene townes in his gouernmēt, and able to make not aboue seuen or eight hundred fighting men at the most: The language of euery gouernment is different from any other, and the farther they are distant the greater is the difference.

Their maner of warres amongst themselues is either by sudden surprising one another most commonly about the dawning of the day, or moone light; or els by ambushes, or some futtle deuises: Set battels are very rare, except it fall out where there are many trees, where eyther part may haue some hope of defence, after the deliuerie of euery arrow, in leaping behind some or other.

If there fall out any warres betwē vs & them, what their fight is likely to bee, we hauing aduantages against them so many maner of waies, as by our discipline, our strange weapons and deuises els; especially by ordinance great and small, it may be easily imagined; by the experience we haue had in some places, the turning vp of their heeles against vs in running away was their best defence.

In respect of vs they are a people poore, and for want of skill and iudgement in the knowledge and vse of our things, doe esteeme our trifles before thinges of greater value: Notwithstanding in their proper manner considering the want of such meanes as we haue, they seeme very ingenious; For although they haue no such tooles, nor any such craftes, sciences and artes as wee; yet in those thinges they doe, they shewe excellencie of wit. And by howe much they vpon due consideration shall finde our manner of knowledges and craftes to exceede theirs in perfection, and speed for doing or execution, by so much the more is it probable that they shoulde desire our friendships & loue, and haue the greater respect for pleasing and obeying vs. Whereby may bee hoped if meanes of good gouernment bee vsed, that they may in short time be brought to ciuilitie, and the imbracing of true religion.

Some religion they haue alreadie, which although it be farre from the truth, yet beyng at it is, there is hope it may bee the easier and sooner reformed.

They beleeeue that there are many Gods which they call *Mantóac*, but of different sortes and degrees; one onely chiefe and great God, which hath bene from all eternitie. Who as they affirme when hee purposed to make the worlde, made first other goddes of a principall order to bee as meanes and instruments to bee vsed in the creation and gouernment to follow; and after the Sunne, Moone, and Starres, as pettie goddes and the instruments of the other order more principall. First they say were made waters, out of which by the gods was made all diuersitie of creatures that are visible or inuisible.

For mankind they say a woman was made first, which by the woorking of one of the goddes, conceiued and brought foorth children: And in such sort they say they had their beginning.

A briefeant true report,

But how manie yeeres or ages haue passed since, they say they can make no relation, hauing no letters nor other such meanes as we to keepe recordes of the particularities of times past, but onelie tradition from father to sonne.

They thinke that all the gods are of humane shape, & therefore they represent them by images in the formes of men, which they call *Kewasowok* one alone is called *Kewás*; Them they place in houses appropriate or temples which they call *Mathicómuck*; Where they woorship, praie, sing, and make manie times offerings vnto them. In some *Mathicómuck* we haue seene but on *Kewas*, in some two, and in other some three; The common sort thinke them to be also gods.

They beleue also the immortalitie of the soule, that after this life as soone as the soule is departed from the bodie according to the workes it hath done, it is eyther carried to heauē the habitacle of gods, there to enioy perpetuall blisse and happinesse, or els to a great pitte or hole, which they thinke to bee in the furthest partes of their part of the worlde towarde the sunne set, there to burne continually: the place they call *Popogusso*.

For the confirmation of this opinion, they tolde mee two stories of two men that had been lately dead and reuiued againe, the one happened but few yeres before our comming in the countrey of a wicked man which hauing beene dead and buried, the next day the earth of the graue beeing seene to moue, was takē vp againe; Who made declaration where his soule had beene, that is to saie very neere entering into *Popogusso*, had not one of the gods saued him & gaue him leaue to returne againe, and teach his friends what they should doe to auoid that terrible place of torment.

The other happened in the same yeere wee were there, but in a towne that was threescore miles from vs, and it was tolde mee for straunge newes that one beeing dead, buried and taken vp againe as the first, shewed that although his bodie had lien dead in the graue, yet his soule was aliue, and had trauailed farre in a long broad waie, on both sides whereof grewe most delicate and pleasaūt trees, bearing more rare and excellent fruites then euer hee had seene before or was able to expresse, and at length came to most braue and faire houses, neere which hee met his father, that had beene dead before, who gaue him great charge to goe backe againe and shew his friendes what good they were to doe to enioy the pleasures of that place, which when he had done he should after come againe.

What subtilty soeuer be in the *Wiroances* and Priestes, this opinion worketh so much in manie of the common and simple sort of people that it maketh them haue great respect to their Gouvernours, and also great care what they do, to auoid torment after death, and to enioy blisse; althought notwithstanding there is punishment ordained for malefactours, as stealers, whoremoongers, and other sortes of wicked doers; some punished with death, some with forfeitures, some with beating, according to the greatnes of the factes.

And this is the summe of their religion, which I learned by hauing special familiarity

Of the new foundland of Virginia. 27

miliarity with some of their priestes. Wherein they were not so sure grounded, nor gaue such credite to their traditions and stories but through conuersing with vs they were brought into great doubts of their owne, and no small admiratiō of ours, with earnest desire in many, to learne more than we had meanes for want of perfect vtterance in their language to expresse.

Most thinges they sawe with vs, as Mathematicall instruments, sea compasses, the vertue of the loadstone in drawing yron, a perspectiue glasse whereby was shewed manie strange sightes, burning glasse, wilde fire woorkes, gunnes, bookes, writing and reading, spring clocks that seeme to goe of themselues, and manie other thinges that wee had, were so straunge vnto them, and so farre exceeded their capacities to comprehend the reason and meanes how they should be made and done, that they thought they were rather the works of gods then of men, or at the leastwise they had bin giuen and taught vs of the gods. Which made manie of them to haue such opinion of vs, as that if they knew not the trueth of god and religion already, it was rather to be had from vs, whom God so specially loued then from a people that were so simple, as they found themselues to be in comparison of vs. Whereupon greater credite was giuen vnto that we spake of concerning such matters.

Manie times and in euery towne where I came, according as I was able, I made declaration of the contentes of the Bible; that therein was set foorth the true and onelie GOD, and his mightie woorkes, that therein was contayned the true doctrine of saluation through Christ, with manie particularities of Miracles and chiefe poyntes of religion, as I was able then to vtter, and thought fitte for the time. And although I told them the booke materially & of it self was not of anie such vertue, as I thought they did conceiue, but onely the doctrine therein cōtained; yet would many be glad to touch it, to embrace it, to kisse it, to hold it to their breasts and heades, and stroke ouer all their bodie with it; to shewe their hungrie desire of that knowledge which was spoken of.

The *Wiroans* with whom we dwelt called *Wingina*, and many of his people would be glad many times to be with vs at our praers, and many times call vpon vs both in his owne towne, as also in others whither he sometimes accompanied vs, to pray and sing Psalmes; hoping thereby to bee partaker of the same effectes which wee by that meanes also expected.

Twise this *Wiroans* was so grieuously sicke that he was like to die, and as hee laie languishing, doubting of anie helpe by his owne priestes, and thinking he was in such daunger for offending vs and thereby our god, sent for some of vs to praie and bee a meanes to our God that it would please him either that he might liue or after death dwell with him in blisse, so likewise were the requestes of manie others in the like case.

On a time also when their corne began to wither by reason of a drouth which happened extraordinarily, fearing that it had come to passe by reason that in

some thing they had displeas'd vs, many woulde come to vs & desire vs to praie to our God of England, that he woulde preferue their corne, promising that when it was ripe we also should be partakers of the fruite.

There could at no time happen any strange sicknesse, losses, hurtes, or any other crosse vnto them, but that they woulde impute to vs the cause or meanes thereof for offending or not pleasing vs.

One other rare and strange accident, leauing others, will I mention before I ende, which moued the whole countrey that either knew or hearde of vs, to haue vs in wonderfull admiration.

There was no towne where we had any subtile deuise practis'd against vs, we leauing it vnpunished or not reuenged (because wee fought by all meanes possible to win them by gentlenesse) but that within a few dayes after our departure from euerie such towne, the people began to die very fast, and many in short space; in some townes about twentie, in some fourtie, in some sixtie, & in one sixe score, which in trueth was very manie in respect of their numbers. This happened in no place that wee coulde learne but where wee had bene, where they vsed some practise against vs, and after such time; The disease also so strange, that they neither knew what it was, nor how to cure it; the like by report of the oldest men in the countrey neuer happened before, time out of minde. A thing specially obserued by vs as also by the naturall inhabitants themselues.

Insomuch that when some of the inhabitants which were our friends; & especially the *Wiroans Wingina* had obserued such effects in foure or fiue towns to follow their wicked practises, they were perswaded that it was the worke of our God through our meanes, and that wee by him might kil and slai whom wee would without weapons and not come neere them.

And thereupon when it had happened that they had vnderstanding that any of their enemies had abused vs in our iourneyes, hearing that wee had wrought no reuenge with our weapons, & fearing vpon some cause the matter should so rest: did come and intreate vs that we woulde bee a meanes to our God that they as others that had dealt ill with vs might in like sort die; alleaging howe much it would be for our credite and profite, as also theirs; and hoping furthermore that we would do so much at their requests in respect of the friendship we professe them.

Whose entreaties although wee shewed that they were vngodlie, affirming that our God would not subiect him selfe to anie such praier and requestes of me: that in deede all thinges haue beene and were to be done according to his good pleasure as he had ordain'd: ad that we to shew our selues his true seruants ought rather to make petition for the contrarie, that they with them might liue together with vs, bee made partakers of his truth & serue him in righteousnes; but notwithstanding in such sort, that wee referre that as all other thinges, to bee done according to his diuine will & pleasure, ad as by his wisdom he had ordain'd to be best.

Yet

Of the new foundland of Virginia. 29

Yet because the effect fell out so sodainly and shortly after according to their desires, they thought neuerthelesse it came to passe by our meanes, and that we in vsing such speeches vnto them did but dissemble the matter, and therefore came vnto vs to giue vs thankes in their manner that although wee satisfied them not in promise, yet in deedes and effect we had fulfilled their desires.

This maruelous accident in all the countrie wrought so strange opinions of vs, that some people could not tel whether to think vs gods or men, and the rather because that all the space of their sicknesse, there was no man of ours knowne to die, or that was specially sicke: they noted also that we had no women amongst vs, neither that we did care for any of theirs.

Some therefore were of opinion that wee were not borne of women, and therefore not mortall, but that wee were men of an old generation many yeeres past then risen againe to immortalitye.

Some woulde likewise seeme to prophesie that there were more of our generation yet to come, to kill theirs and take their places, as some thought the purpose was by that which was already done.

Those that were immediatly to come after vs they imagined to be in the aire, yet inuisible & without bodies, & that they by our intreaty & for the loue of vs did make the people to die in that sort as they did by shooting inuisible bullets into them.

To confirme this opinion their phisitions to excuse their ignorance in curing the disease, would not be ashemed to say, but earnestly make the simple people beleue, that the strings of blood that they sucked out of the sicke bodies, were the strings wherewithal the inuisible bullets were tied and cast.

Some also thought that we shot them our selues out of our pieces from the place where we dwelt, and killed the people in any such towne that had offended vs as we listed, how farre distant from vs soeuer it were.

And other some saide that it was the speciall worke of God for our sakes, as wee our selues haue cause in some sorte to thinke no lesse, whatsoeuer some doe or maie imagine to the contrarie, specially some Astrologers knowing of the Eclipse of the Sunne which wee saw the same yeere before in our voyage thitherward, which vnto them appeared very terrible. And also of a Comet which beganne to appeare but a few daies before the beginning of the said sicknesse. But to exclude them from being the speciall an accident, there are farther reasons then I thinke fit at this present to bee alleadged.

These their opinions I haue set downe the more at large that it may appeare vnto you that there is good hope they may be brought through discreet dealing and gouernement to the imbracing of the trueth, and consequently to honour, obey, feare and loue vs.

A brieve and true report,

And although some of our companie towards the ende of the yeare, shewed themselues too fierce, in slaying some of the people, in some towns, vpon causes that on our part, might easily enough haue been borne withall: yet notwithstanding because it was on their part iustly deserued, the alteration of their opinions generally & for the most part concerning vs is the lesse to be doubted. And whatsoever els they may be, by carefulnesse of our selues neede nothing at all to be feared.

The best neuerthelesse in this as in all actions besides is to be endeouored and hoped, & of the worst that may happen notice to be taken with consideration, and as much as may be eschewed.

The

The Conclusion.

Now I haue as I hope made relation not of so fewe and smal things but that the countrey of men that are indifferent & wel disposed maie be sufficiently liked: If there were no more knowen then I haue mentioned, which doubtlesse and in great reason is nothing to that which remaineth to bee discouered, neither the soyle, nor commodities. As we haue reason so to gather by the difference we found in our trauails: for although all which I haue before spoken of, haue bin discouered & experimented not far from the sea coast where was our abode & most of our trauailing: yet somtimes as we made our iourneies farther into the maine and countrey; we found the soyle to bee fatter; the trees greater and to growe thinner; the grounde more firme and deeper mould; more and larger champions; finer grasse and as good as euer we saw any in England; in some places rockie and farre more high and hillie ground; more plentie of their fruites; more abondance of beastes; the more inhabited with people, and of greater pollicie & larger dominions, with greater townes and houses.

Why may wee not then looke for in good hope from the inner parts of more and greater plentie, as well of other things, as of those which wee haue alreadie discouered? Vnto the Spaniards happened the like in discouering the maine of the West Indies. The maine also of this countrey of *Virginia*, extending some wayes so many hundreds of leagues, as otherwise then by the relation of the inhabitants wee haue most certaine knowledge of, where yet no Christian Prince hath any possession or dealing, cannot but yeeld many kinds of excellent commodities, which we in our discouerie haue not yet seene.

What hope there is els to be gathered of the nature of the climate, being answerable to the land of *Iapan*, the land of *China*, *Persia*, *Jury*, the landes of *Cyprus* and *Candy*, the South parts of *Greece*, *Italy*, and *Spaine*, and of many other notable and famous countreis, because I meane not to be tedious, I leaue to your owne consideration.

Whereby also the excellent temperature of the ayre there at all seasons, much warmer then in England, and neuer so violently hot, as sometimes is vnder & between the Tropikes, or nere them; cannot bee vnknowne vnto you without farther relation.

For the holsomnesse thereof I neede to say but thus much: that for all the want of prouision, as first of English victuall; excepting for twentie daies, wee liued only by drinking water and by the victuall of the countrey, of which some sorts were very straunge vnto vs, and might haue bene thought to haue altered our temperatures in such sort as to haue brought vs into some greuous and dāgerous diseases: secondly the wāt of English meanes, for the taking of beastes, fishe, and foule, which by the helpe only of the inhabitants and their meanes, coulde not bee so suddenly

A briefe and true report,

and easily provided for vs, nor in so great numbers & quantities, nor of that choise as otherwise might haue bene to our better satisfaction and contentment. Some want also wee had of clothes. Furthermore, in all our trauailes which were most speciall and often in the time of winter, our lodging was in the open aire vpon the grounde. And yet I say for all this, there were but foure of our whole company (being one hundred and eight) that died all the yeere and that but at the latter ende thereof and vpon none of the aforesaide causes. For all foure especially three were feeble, weake, and sickly persons before euer they came thither, and those that knewe them much marueyled that they liued so long beeing in that case, or had aduentured to trauaile.

Seing therefore the ayre there is so temperate and holosome, the soyle so fertile and yeelding such commodities as I haue before mentioned, the voyage also thither to and fro beeing sufficiently experimented, to bee perfourmed thrise a yeere with ease and at any season thereof: And the dealing of *Sir Water Raleigh* so liberrall in large giuing and graunting lande there, as is alreadie knowen, with many helpes and furtherances els: (The least that hee hath graunted hath benee fiue hundred acres to a man onely for the aduenture of his person:) I hope there remaine no cause wherby the action should be misliked.

If that those which shall thither trauaile to inhabite and plant bee but reasonably provided for the first yere as those are which were transported the last, and beeing there doe vse but that diligence and care as is requisite, and as they may with ease: There is no doubt but for the time following they may haue victuals that is excellent good and plentie enough; some more Englishe sortes of cattaile also hereafter, as some haue bene before, and are there yet remaining, may and shall bee God willing thither transported: So likewise our kinde of fruites, rootes, and herbes may bee there planted and sowed, as some haue bene alreadie, and proue wel: And in short time also they may raise of those sortes of commodities which I haue spoken of as shall both enrich them selues, as also others that shall deale with them.

And this is all the fruites of our labours, that I haue thought necessary to aduertise you of at this present: what els concerneth the nature and manners of the inhabitants of *Virginia*: The number with the particularities of the voyages thither made; and of the actions of such that haue bene by *Sir Water Raleigh* there in and there imployed, many worthy to bee remembred; as of the first discouersers of the Countrey: of our generall for the time *Sir Richard Greinuile*; and after his departure, of our Gouvernour there Master *Rafe Lane*; with diuers other directed and imployed vnder theyr gouernement: Of the Captaynes and Masters of the voyages made since for transportation; of the Gouvernour and assistants of those alreadie transported, as of many persons, accidets, and thinges els, I haue ready in a discourse by

Of the new foundland of Virginia. 33

se by it self in maner of a Chronicle according to the course of times, and when time shall bee thought conuenient shall be also published.

Thus referring my relation to your fauourable constructions, expecting good successe of the action, from him which is to be acknowledged the authour and gouernour not only of this but of all things els, I take my leaue of you,
this moneth of Februarii,

1588.

THE TABLE
OF ALL DE PICTV-
RES CONTAINED IN
this Booke of Virginia.

- I. The carte of all the coast of Virginia.
- II. The arriall of the Englishemen in Virginia.
- III. A Weroan or great Lorde of Virginia.
- IIII. On of the chieff Ladyes of Secota.
- V. On of the Religeous men in the towne of Secota.
- VI. A younge gentill woeman doughter of Secota.
- VII. A chieff Lorde of Roanoac.
- VIII. A chieff Ladye of Pomeiooc.
- IX. An ageed manne in his winter garment.
- X. Their manner of careyngether Childern and atyere of the chieffe Ladyes of the towne of Dasamonquepeuc.
- XI. The Coniuerer.

- XII. Their manner of makinge their Boates.
- XIII. Their manner of fishynge in Virginia.
- XIIII. The browyllinge of their fishe ouer the flame.
- XV. Their seetheynge of their meate in earthen pottes.
- XVI. Their Sitting at meate.
- XVII. Their manner of prayinge with their Rattels about the fyer.
- XVIII. Their danfes whych they vse at their hyghe feastes.
- XIX. The towne of Pomeiooc.
- XX. The towne of Secota.
- XXI. Ther Idol Kiwasa.
- XXII. The Tombe of their Werowans or chieff Lordes.
- XXIII. The marckes of fundrye of the chiefe me-
ne of Virginia.

To the gentle Reader.

Although (frendlye Reader) man by his disobedience, weare deprived of those good Gifts wher with he was indued in his creation, yet he was not berefte of wit to prouyde for hym selfe, nor discretion to deuise things necessarie for his vse, except suche as appartayne to his soules healthe, as may be gathered by this sauage nations, of whome this present worke intreateth. For although they haue noe true knoledge of God nor of his holye worde and are destituted of all lerninge, Yet they passe vs in many thinges, as in Sober feedinge and Dexteritye of witte, in makinge without any instrument of mettall thinges so neate and so fine, as a man would scarsclye beleue thesame, Vnless the Englishemen Had made prooffe Therof by their trauailes into the contrye. Consideringe, Therefore that yt was a thinge worthie of admiration, I was verye willinge to offer vnto you the true Pictures of those people wich by the helpe of Maister Richard Hakluyt of Oxford Minister of Gods Word, who first Incouraged me to publish the Worke, I craued out of the verye original of Maister Ihon White an English paynter who was sent into the contrye by the queenes Maiestye, onlye to draw the description of the place, lynelye to describe the shapes of the Inhabitants their apparell, manners of Liuinge, and fashions, att the speciall Charges of the worthy knighte, Sir WALTER RALEGH, who bestowed noe Small Summe of monnye in the serche and Discouerye of that counrye, From te yeers, 1584. to the ende of The yeers 1588. Morouer this booke which intreateth of that parte of the new World which the Englishemen call by the name of Virginia I heer sett out in the first place, beinge therunto requested of my Friends, by Raeson of the memorye of the fresh and laue performance ther of, albeyt I haue in hand the Historye of Florida wich should bee first sett foorth because yt was discouered by the Frencheman longe befor the discouerye of Virginia, yet I hope shortlye also to publish thesame, A Victorie, doubtless so Rare, as I thinke the like hath not ben heard nor seene. I craued both of them at London, an brought, Them hither to Franckfurt, wher I and my sonnes hauen taken earnest paynes in grauinge the pictures ther of in Copper, seeing yt is a matter of noe small importance. Touchinge the stile of both the Discourses, I haue caused yt to bee Reduced into verye Good Frenche and Latin by the aide of verye worshipfull frend of myne. Finallye I hartlye Request thee, that yf any seeke to Contrefaict thes my bookx, (for in this dayes many are so malicious that they seeke to gayne by other men labours) thou wouldest giue noe credit vnto suche conterfaieted Drawghte. For dyuers secret marks lye hiddin in my pictures, which wil breede Confusion vnless they bee well obserued.

The arriual of the Englishemen II.

in Virginia.

The sea coasts of Virginia are full of Ilands, wehr by the entrance into the mayne lād is hard to finde. For although they bee separated with diuers and fundrie large Diuision, which seeme to yeeld conuenient entrance, yet to our great perill we proued that they wear shallowe, and full of dangerous flatts, and could neuer perce opp into the mayne lād, vntill wee made trialls in many places with or small pinness. At lengthe wee fownd an entrance vppon our mens diligent serche therof. After that wee had passed opp, and sayled ther in for a short space we discovered a migthye riuer fallnige downe in to the fownde ouer against those Ilands, which neuertheless wee could not faile opp any thinge far by Reason of the shallewnes, the mouth ther of beinge annoyed with sands driuen in with the tyde therefore saylinge further, wee came vnto a Good bigg yland, the Inhabitante therof as soone as they saw vs began to make a great an horrible crye, as people which meuer befoer had seene men appalled like vs, and camme a way makinge out crys likewild beasts or men out of their wyts. But beeng gently called backe, wee offred the of our wares, as glasses, kniues, babies, and other trifles, which wee thought they deligted in. Soe they stood still, and perceuinge our Good will and courtesie came fawninge vppon vs, and bade us welcome. Then they brought vs to their village in the iland called, Roanoac, and vnto their Weroans or Prince, which entertained vs with Reasonable curtesie, although they wear amased at the first sight of vs. Suche was our arriual into the parte of the world, which we call Virginia, the stature of bodee of wich people, theyr attire, and maneer of luyinge, their feasts, and banketts, I will particullerlye declare vnto yow.

The original of the [illegible]
in [illegible]

1
15

A weroan or great Lorde of Virginia. III.

THe Princes of Virginia are attyred in fuche manner as is expressed in this figure. They weare the haire of their heades long and bynde opp the ende of the same in a knot vnder thier eares. Yet they cutt the topp of their heades from the forehead to the nape of the necke in manner of a cokscombe, stirkinge a faier lóge pecher of some berd att the Begininge of the creste vppun their foreheads, and another short one on bothe seides about their eares. They hang at their eares ether thicke pearles, or somwhat els, as the clawe of some great birde, as cometh in to their fansye. Moreouer They ether pownes, or paynt their forehead, cheeks, chynne, bodye, armes, and leggs, yet in another sorte then the inhabitantz of Florida. They weare a chaine about their necks of pearles or beades of copper, wich they muche esteeme, and ther of wear they also braselets ohn their armes. Vnder their brests about their bellyes appeir certayne spotts, wher they vse to lett them selues bloode, when they are sicke. They hang before thẽ the skinne of some beaste verye feinelye dresse in fuche sorte, that the tayle hangeth downe behynde. They carye a quiuer made of small rushes holding their bowe readie bent in on hand, and an arrowe in the other, radie to defend themselues. In this manner they goe to warr, or tho their solemne feasts and banquetts. They take muche pleasure in huntinge of deer wher of theris great store in the contrye, for yt is fruit full, pleasant, and full of Goodly woods. Yt hath also store of riuers full of diuers sorts of fishe. When they go to battel they paynt their bodyes in the most terrible manner that thei can deuise.

RPJCS

On of the chieff Ladyes of Secota. IIII.

T
 He woemē of Secotam are of Reasonable good proportion. In their goinge they carrye their hāds danglinge downe, and air dadil in a deer skinne verye excellētye wel dressed, hanginge downe frō their nauell vnto the mydds of their thighes, which also couereth their hynder partz. The reste of their bodies are all bare. The forr parte of their haire is cutt sherte, the rest is not ouer Longe, thinne, and softe, and falling downe about their shoulders: They weare a Wrrath about their heads. Their foreheades, cheeks, chynne, armes and leggs are pownced. About their necks they wear a chaine, ether pricked or paynted. They haue small eyes, plaine and flatt noses, narrow foreheads, and broade mowths. For the most parte they hange at their eares chaynes of longe Pearles, and of some smooht bones. Yet their nayles are not longe, as the woemen of Florida. They are also deligttd with walkinge in to the fields, and besides the riuers, to see the huntinge of deers and catchinge of fishe.

RPJCB

On of the Religeous men in the
towne of Secota.

V.

THe Priests of the aforesaid Towne of Secota are well stricken in yeers, and as yt seemeth of more experience then the comon sorte. They weare their heare cutt like a creste, on the topps of thier heades as other doe, but the rest are cutt shorte, sauinge those which growe aboue their foreheads in manner of a perriwigge. They also haue som what hanginge in their ears. They weare a shorte clocke made of fine hares skinnes quilted with the hayre outwarde. The rest of thier bodie is naked. They are notable enchaunters, and for their pleasure they frequent the riuers, to kill with their bowes, and catche wilde ducks, swannes, and other fowles.

RPJCB

A younge gentill woeman doughter VI. of Secota.

Irgins of good parentage are apparelled altogether like the woemen of Secota aboue mentionned, fauing that they weare hanginge abowt their necks in steede of a chaine certaine thicke, and rownde pearles, with little beades of copper, or polished bones betweene them. They pounce their foreheads, cheekes, armes and legs. Their haire is cutt with two ridges about their foreheads, the rest is trused opp on a knott behinde, they haue broade mowthes, reasonable fair black eyes: they lay their hands often vppon their Shoulders, and couer their brests in token of maydenlike modestye. The rest of their bodyes are naked, as in the picture is to bee seene.

They deligt also in seeinge fishe taken in
the riuers.

RFJCB

He cheefe men of the yland and towne of Roanoac reace the haire of their crounes of theyr heades cutt like a cokes cōbe, as thes other doe. The rest they wear lōge as woemen and trufs them opp in a knott in the nape of their necks. They hange pearles stringe copper a threed att their eares, and weare bracelets on their armes of pearles, or small beades of copper or of smoothe bone called minsal, nether pain-tinge nor powncings of them selues, but in token of authoritye, and honor, they wear a chaine of great pearles, or copper beades or smoothe bones abowt their necks, and a plate of copper hinge vpon a stringe, from the nauel vnto the midds of their thighes. They couer themselues before and behynde as the woemē doe with a deers skynne handsomley dressed, and fringed, More ouer they fold their armes together as they walke, or as they talke one wjth another in signe of wifdome.

The yle of Roanoac is veye pleifant, ond hath plaintie of filhe by rea-son of the Water that enuironeth thesame.

Archieves of the Ministry of the Interior

JCB

A cheiff Ladye of Pomeiooc. VIII.

about 20. milles from that Iland, neere the lake of Paquippe, ther is another towne called Pomeioock hard by the sea. The apparell of the cheefe ladyes of dat towne differeth but litle from the attyre of those which lyue in Roanaac. For they weare their haire trussed opp in a knott, as the maiden doe which we spake of before, and haue their skinnes powned in the same manner, yet they weare a chaine of great pearles, or beades of copper, or smoothe bones 5. or 6. fold about their necks, be- aringe one arme in the same, in the other hand they carye a gourde full of some kinde of pleasant liquor. They tye deers skinne doubled about them crochinge hygher about their breasts, which hange downe before almost to their knees, and are almost altogether naked behinde. Commonlye their yonge daughters of 7. or 8. yeares olde do waigt vpon them wearinge about them a girdle of skinne, which hangeth downe behinde, and is drawen vnder neath betwene their twiste, and bown- de aboute their nauel with mose of trees betwene that and thier skinnes to couer their priuiliers withall. After they be once past 10. yeares of age, they weare deer skinnes as the older sorte do.

They are greatlye Diligted with puppetts, and babes which weare brought oute of England.

An ageed manne in his winter IX.
garment.

He aged men of Pommeioocke are couered with a large skinne which is tyed vppon their shoulders on one side and hangeth downe beneath their knees wearinge their other arme naked out of the skinne, that they maye bee at more libertie. Those skynnes are Dressed with the hair on, and lyned with other furred skinnes. The yonnge men suffer noe hairr at all to growe vppon their faces but assoone as they growe they put them away, but when thy are come to yeeres they suffer them to growe although to saye truthe they come opp verye thinne. They also weare their haire bownde op behynde, and, haue a creste on their heads like the others. The contrye about this plase is soe fruit full and good, that England is not to bee compared to yt.

B

(NPJCB)

Their manner of careynge ther Chil- X.
 dern and a tyere of the cheiffe Ladyes of the
 towne of Dasamonquepeuc.

IN the towne of Dasamonquepeuc distant from Roanoac 4. or 5. milles, the woemen are attired, and powned, in suche sorte as the woemen of Roanoac are, yet they weare noe worathes vppon their heads, nether haue they their thighes painted with small pricks. They haue a strange manner of bearing their children, and quite contrarie to ours. For our woemen carrie their children in their armes before their brests, but they taking their sonne by the right hand, bear him on their backs, holdinge the left thighe in their lefte arme after a strange, and conuesnall fashion, as in the picture is to bee seene.

RPJCB

H
 Hey haue comonlye coniurers or iuglers which vse strange gestures, and often contrarye to nature in their enchantments: For they be verye familiar with deuils, of whome they enquier what their enemys doe, or other suche thinges. They shaue all their heads sauinge their creste which they weare as other doe, and fasten a small black birde aboute one of their ears as a badge of their office. They weare nothinge but a skinne which hangeth downe from their gyrdle, and couereth their priuityes. They weare a bagg by their side as is expressed in the figure. The Inhabitants giue great credit vnto their speche, which oftentimes they finde to be true.

The manner of makinge their boates. XII.

T. B.

12

THe manner of makinge their boates in Virginia is veyre wonderfull. For wheras they want Instruments of yron, or other like vnto ours, yet they knowe howe to make them as handsomelye, to saile with whear they liste in their Riuers, and to fishe with all, as ours. First they choose some longe, and thicke tree, accordinge to the bignes of the boate which they would frame, and make a fyre on the ground about the Roote therof, kindlinge the same by little, and little with drie mosse of trees, and chipps of woode that the flame should not mounte opp to highe, and burne to mucche of the lengthe of the tree. When yt is almost burnt thorough, and readye to fall they make a new fyre, which they suffer to burne vntill the tree fall of yt owne accord. Then burninge of the topp, and bowghs of the tree in suche wyse that the bodie of thesame may Retayne his iust lengthe, they raise yt vppon potes laid ouer cross wise vppon forked posts, at suche a reasonable heighte as they may handsomlye worke vppō yt. Then take they of the barke with certayne shells: thy reserue the, innermost parte of the lenneke, for the nethermost parte of the boate. On the other side they make a fyre accordinge to the lengthe of the bodie of the tree, sauinge at both the ends. That which they thinke is sufficientlye burned they quenche and scrape away with shells, and makinge a new fyre they burne yt agayne, and soe they continne somtymes burninge and sometymes scrapinge, vntill the boate haue sufficient bothowmes. This god indueth thise sauage people with sufficient reason to make thinges necessarrie to serue their turnes.
